

RQ4.5 cell output

Notebook cell export: rq45_cell_output.pdf

Includes this cell's printed text, displayed tables, and generated figures.

Printed output

```
[RQ4.5] Denominator: 4 loaded run(s) × 1000 tail episodes × 8 agents × 12 years = 384,000 expected cells (96,000 per run); actual counted cells = 384,000.
```

Printed output

```
[RQ4.5] Final non-compliant cells: 66,112 (17.2%); auction-stressed but compliant cells: 142,175 (37.0%).
```

Printed output

```
[RQ4.5] Non-compliant (agent, year, episode) cells in converged window: 66,112
```

Printed output

```
[RQ4.5]  $\Sigma$  shortfall across the window: 79,149.41 Mt
```
